TITLE

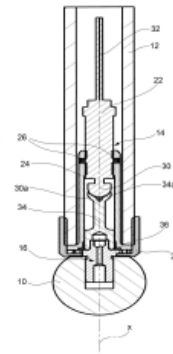

Contact Sensor, Especially For Robotic Foot

INVENTORS

Yifu GAO, Claudio SEMINI, Michele FOCCHI, Darwin CALDWELL

DESCRIPTION

The present invention relates to a contact sensor, designed in particular to be used on a robot provided with legs for detecting contact between the foot of each robot leg with the ground.

APPLICATIONS

Robotics

KEYWORDS

Planar spring, foot, robot, contact detection

BIBLIOGRAPHIC DATA

Sensore Di Contatto, Particolarmente Per Piede Di Robot

Application Number IT 102018000002407

Priority Date February 5, 2018

Applicants Fondazione Istituto Italiano di Tecnologia, Università degli Studi di Genova
